

The FRUITS of the Crabo Group PHILOSOPHY, conscientious of Man and his Environment

1 – **We design and make mountable chairs and tables** (kd) which need to be packaged in spaces smaller than those of the mounted product (fx). On the one hand they mean less bulky volumes which **reduce the numbers of vehicles needed for the transportation** of products and which allow us to contribute to the reduction of pollution connected to traffic congestion. On the other hand, less volume also means **less packaging materials** (cardboard, plastic and polystyrene) and so with less disposal costs for the society.

2 – we have developed the **Circolo Integrato del Recupero (Integrated Recovering Cycle)**, a system which permits the re-use of wooden chair and table production discards together with a selection, carried out by our plant, of the plastic coming from recycling in order to **produce innovative eco-compatible materials, new products and to generate thermal and electric energy.**

3 – thanks to the *Integrated recovering cycle*, we not only preserve prime virgin materials (trees and oil) but we also contribute to **limiting the space assigned to rubbish dumps**, liberating the local population from a part of the elevated costs involved in waste disposal.

4 – we use **wood from a forestation programme** which comes from the Mount Tara Mountain National Park in Serbia.

5 – In collaboration with the Mount Tara Mountain National Park in Serbia we produce **Pellets**, compressed wooden tablets used for household heating and which are characterised by their limited costs and, as a vegetative fuel, for its **low CO2 emission.**

6 – we are started using **recycled paper** in all of our informative and commercial publications and we are also developing communication material in order to further sensitise our employees about the importance of **ecological behaviour in the workplace.** We encourage the exchange of information inside and outside the company through electronic devices (emails, videoconference, cds) to lower paper waste.

7 – we have created the possibility for development in companies that have been recently purchased which, in locally persecuted areas, have moved from **production linked to a wartime economy to that of table and chair production.**
